The INTERNATIONAL UFO REPORTER is a benefit publication mailed to ASSOCIATES of the Center for UFO Studies contributing \$15.00 or more to the Center for UFO Studies. Foreign ASSOCIATES add \$5.00 for surface or \$10.00 for airmail delivery. All amounts in U.S. funds. Other publications also available to contributors of larger amounts. For details, write to P.O. Box 1621, Lima, Ohio 45802, USA. POSTMASTER: Send Form 3579 to CUFOS, P.O. Box 1621, Lima, Ohio 45802.

# Guest Editorial:

## 10th Anniversary of the Center for UFO Studies

by Mark Rodeghier

This November, the Center for UFO Studies is 10 years old. Although I have not been with the Center for the entire decade, I welcome this opportunity to survey and reflect upon its successes and its disappointments and, as I view them, its strengths and shortcomings. A 10th anniversary is a good time to take stock and, certainly, to plan for the next decade.

The Center probably wouldn't be here if it hadn't been for the great wave of UFO sightings during the fall of 1973. Much of the potential scientific value of that flood of sightings was being lost and just "going down the drain." There was no body of scientists even taking a look at what was happening; the UFO reports were not being systematically gathered, classified, and studied. Dr. Hynek, recognizing the need for such a scientific group, paced the floor, waved his arms, and declared to his companions, "Let there be a Center..."

And so it started. Hynek formed a not-for-profit organization. To expedite its becoming a legal entity, Sherman Larsen, who had been active in NICAP in the Chicago area and who headed an already legally-established organization called PEG (Public Education Group) dedicated to informing the public about UFOs, made the excellent suggestion that weeks of paper handling could be eliminated by simply legally changing the name of PEG to CUFOS. The aims of the two organizations were related; the Center, however, was to be much more scientifically-oriented. Indeed, the intent of the Center then was considerably different from what eventuated. Hynek envisioned it as a small group of scientists actively investigating the UFO phenomenon, a *visible* rather than an *invisible* college. It was hoped that the Center would stay out of the public eye and work privately as a Research Institute. It was not anticipated that the Center would publish anything for popular consumption.

Regretably or not, almost from the first, its "mission" changed because of pressure from the public itself and lack of financial support for the first mission. The public and the media quickly recognized the Center as a source of responsible information about UFOs and requests for information burgeoned. To some extent this was inevitable; serious research, away from public scrutiny, is expensive business, and funds for such simply were not forthcoming.

It is not possible within the confines of a single, even though extended, editorial, to list the many accomplishments of the Center, nor its shortcomings. We can only highlight a few of special importance. One should begin with the simple fact that CUFOS was founded by a well-respected scientist. While not detracting from the fine work of other UFO investigative groups, the Center became the first UFO organization founded by a senior scientist of impeccable credentials. Recognizing that research without wide dissemination to those with serious interest is largely pointless, the Center initiated special reports, monographs, conference proceedings and, in particular, the *Journal of UFO Studies*. The scope of these publications was, and still is, limited only by staff and funds.

Three years after its founding, when hope for research support still ran high, a full time, paid investigator (Allan Hendry) joined the staff. No other civilian UFO organization has had a full-time, paid UFO investigator, and especially one who was rigorously committed to the search for truth. At that time, in order for the immediate results of Center investigations to be made known on a continuing basis, the *International UFO Reporter* began publication, with Hendry as its managing editor.

These two new ventures placed a severe strain on Center finances and had it not been for the support, personal and especially financial, of John Timmerman, the present Chairman of the Board of the Center, in all probability the Center would have ceased to exist as a viable entity. Even with the enormous assistance of Timmerman, it became impossible to maintain the position of a salaried investigator and IJR editor, as well as office space in downtown Evanston. Today this publication is largely written and edited by Hynek who also undertakes to investigate critical cases first-hand, and to monitor as closely as possible the investigation of any case that is presented to the REPORTER.

Despite financial difficulties, the Center has an enviable publication record, unequaled in scope and extent by any other civilian UFO investigative organization in the world, to the best of my knowledge. There have been the monographs, edited by Mimi Hynek, which include: Physical Traces Associated with UFO Sightings (Phillips), A Helicopter-UFO Encounter over Ohio (Zeidman), The Lumberton Report (Zeidman), the UFOCAT Codebook (Saunders), the many printouts from UFOCAT (Saunders and Merritt), 1973—Year of the Humanoids (Webb), UFO Reports Involving Vehicle Interference (Rodeghier), and many shorter papers and bulletins. Center publications and much other UFO related material have been made available through the UFO Information Service, operated by the Center.

In all honesty, we must also recognize where the Center has failed to achieve its aims. Perhaps we were too optimistic; admittedly, we have fallen short of our goal of bringing the UFO phenomenon to the serious attention of the scientific community. We have not even been able to enlist much active aid of recognized scientists in conducting research into this field, as we had hoped we could do. Nor have we attracted, with certain notable exceptions, the overall quality of UFO field investigators we had anticipated and needed.

Many, though not all, of our tribulations would have vanished had there been a sufficiency of operating funds, but lack of such is faced by every UFO organization we know of around the world. This, for example, made it necessary for the Center to discontinue its Police UFO Hotline (1982) and to relinquish rented office space.

From these tribulations the Center has, in my opinion, learned that it had best substitute modest and attainable goals for the presently unattainable great but distant goals. The study of the UFO phenomenon has now reached the point where no UFO organization can be all things to all people, to do single-handedly all that is required toward the eventual solution of the problem. In physics, for example, no one research facility supports research in relativity, solid state physics, quantum mechanics, high energy physics, cryogenics, and so on. Rather, each specializes to a large extent. It is by that principle that the future work of the Center should be guided. Perhaps such cooperation can be guided through the new North American UFO Federation (NAUFOF) and, on the international scene, by ICUR (International Committee for UFO Research).

If anything has been learned over the past decade it is that the UFO phenomenon is far more complex than many had thought originally. None of the "simple" solutions have borne fruit. Perhaps the answer lies in several directions, or perhaps in one as yet unexplored. The many facets of the UFO phenomenon: claims of abduction, of missing time, of seemingly impossible maneuvers by UFOs, plus the many reported types of physical effects, of physiological and psychological damage perpetrated by UFOs, and many more, including the growing evidence that the governments of the world may know much more about the subject than has been admitted, all of these have demonstrated the innate complexity of the UFO subject, and certainly have precluded the adoption, at this time, of any one theory for UFOs.

It has been relatively easy for me to reflect upon the first ten years of the Center's existence, but as for the future... There is an old Chinese proverb that says it succinctly: "To prophesy is extremely difficult, especially with respect to the future." One could, perhaps, hope that there will be no 20th anniversary of the Center, that the whole problem will be solved by 1993. Yet, even if that should be the case, the Center or its equivalent would still be necessary because it has always been the case in science that answers have always led to more questions, requiring more rather than less research. Such may well be the case with UFOs.

Whatever the future brings, we at the Center fully intend to insure that the Center remains viable; there is even more need for such a research organization, working cooperatively with others, than there was in 1973. Cooperation may well be the keyword for the next decade because it would seem that the destiny of the Center and other organizations is inextricably intertwined with that of the bizarre and presently inexplicable phenomenon we call UFOs.

## An Apology from Us (and from Our Printer, too)

The last issue of the REPORTER was not only late but contained a very glaring "typo." The delay was due largely to a mixup at the printers, and one which was well beyond our control. The typo, lest you think that our editors can't read big print, was plainly marked when the galleys went back to the printer. It was the printer who apparently couldn't read big type. The typo itself, in case you haven't found it for yourselves, seems impossible to miss! It's on page 8, at the very top in very big print. Please substitute "BOOMERANG" for "BOOMERING." What is a Boomerang, anyway... something one should use on printers?

## IF YOU WISH TO HELP...

There are ways in which you can be of real assistance to the Center, besides by giving your financial support.

You can deliver personally to the Marketing Managers of enclosed Shopping Malls in your area our mailing regarding the CUFOS UFO PHOTO EXHIBIT. The exhibit will inform the public, encourage the reporting of valuable sightings and help pay the costs of their careful investigation.

You can telephone the Program Directors of radio stations in your area and ask them to request a free tape of public service announcements which inform the public about the nature of the UFO phenomenon and how to report a possible sighting for investigation.

You can notify your local service clubs of the availability of half-hour programs of slide photographs and recorded narration by Dr. Hynek on the subjects of UFOs.

Write to our Business Office, P. O. Box 1621, Lima, OH 45802 for details □

## A Timely Last-Minute Gift Suggestion

A number of readers have told us that an Associateship (of the 1st, 2nd, or 3rd Kinds) has made an excellent gift, especially for those people "who have everything." Perhaps you have someone on your list who is interested in UFOs. If he or she is, such a gift might hit the spot; if they aren't, maybe the gift will get them interested! Worth a try!

# A Remarkable Double Encounter

by J. Allen Hynek

**TYPE:** CE-I  
**DATE:** March 30, 1982  
April 1, 1982  
**TIME:** 11:15 P.M.  
11:30 P.M.  
**DURATION:** 15-20 min.  
2 min.  
**WITNESSES:** The same two each time  
**PLACE:** Charlottesville, VA.  
Charlottesville, VA.

by J. Allen Hynek

One of the remarkable features of these sightings, though possibly attributable to coincidence (the witnesses definitely do not agree), is not only that the second occurred just two days after the first (and there have been none since) but that it happened just a half-hour after I had finished an hour-long telephone interview with the principal witness. In any event, this is the closest I have personally come to a CE-I event.

Although we were apprised of this case immediately by the local police, who had been quickly notified by the witnesses, we have delayed publication to allow for further study and follow-up. It is often desir-

able to wait for a period, then while re-doing some of the investigation, to note to what extent the witnesses accounts have changed during the interval. In this case there has been virtually no change in their accounts. Past experience has shown us that it would appear that when a sufficiently traumatic or very unusual event occurs, its imprint on the memory tends to be indelible.

Furthermore, the experienced investigator learns that the original UFO event may be only the initial part of the total case. What comes after should also form a part of its proper study. This is particularly true when one is working with intelligent and articulate witnesses who themselves want to get to the bottom of things as much as possible. The present witnesses fulfill this condition. The principal witness, Nanette Morrison (who has given permission to use her name, writes: "Fortunately, I have never been afraid of a little ridicule") is administrative coordinator of the Neuroscience Program at the University of Virginia Medical School. Her mother, the second witness, has been a schoolteacher in Charlottesville for some 20 years.

Here is the story of the first event, told largely in the words of the witness: "After a very pleasant dinner I continued my trip home alone, traveling a route that was very familiar to me and one that was ordinarily quite busy. This evening, however, there was no other automobile in sight during the entire way home. I was approaching the subdivision where I live with my parents when I suddenly spotted a large, brilliant light in the sky several hundred feet above the ground and probably a quarter of a mile directly in front of my car.

"My initial impression was that it was a large airplane with its landing lights on, traveling directly toward me; this could make it seem motionless. I turned off the car radio and rolled down my window to listen for sound. There was none whatsoever.

"Continuing down the road, I seemed to be drawing near to the craft. Then I realized that it was not moving at all; it was hovering over the road in front of me. I was the one that was doing the moving. At this point, I reached the intersection where I would turn left onto another street. My anxiety mounted further as the craft suddenly disappeared from my view as I made the turn. It flew right over the top of my car.

"It swung itself around to the left side of my car, and positioned itself well in my view outside the window on the driver's side. It remained easily visible in the top corner of my open window, and paced my car for the remaining 15 blocks to my house. I covered the curving, winding streets in approximately 10 minutes, my visitor staying with my car, making each turn just as I did. I made a mental note that the vehicle's movements, its lighting, and the lack of sound reminded me of a submarine, its brilliant light illuminating the gloomy void around it.

"During this interlude, many different emotions were hitting me all at once. Fear, curiosity, excitement...all coursed through me simultaneously. Curiosity finally won out over the others. I had slowed my car to a snail's pace, barely moving, just enough

This drawing shows the 'submarine-like' UFO, which first flew over the witness' car, then swung to the left side, pacing the car for the remaining 15 blocks to her home.

to keep it from stalling; I was not prepared to stop completely.

"My gaze was transfixed on the light. Too brilliant for me to be able to ascertain a shape, the space craft did, however, seem to have at least five distinct compartments from which the brilliant white light was emitted. Straining my senses, I still couldn't hear any sound, nor had I yet encountered any other moving automobiles.

"Finally, I approached my house. Instead of pulling into the driveway, I stopped my car on the edge of the street in front of the house. I was frantic with excitement! Would my visitors wait long enough for someone else to see? I turned off the ignition but left my lights on. The craft ceased moving as soon as my car did; it was hovering, motionless over the house across the street! This was its closest approach to me...less than 400 feet. I was so fascinated that I could hardly move. I was torn between just sitting there watching or getting someone else to see it. Suddenly, I burst open the car door and bolted across the front lawn. Once on the front porch, I ventured a peek behind me. My companions slowly reversed their direction and began to leave. The vehicle did not turn or bank as most aircraft would noticeably do. While watching their departure, I rang the doorbell and banged on the door. Seconds later my mother opened the door and greeted my shouts; I was hardly even coherent: 'Come here, look, quick, see what followed me home!'

"Mom immediately looked down the street at my car which still had its lights on. 'Well, I don't see anything!'

"Exasperated and jumping up and down, I pointed at the sky, 'No, not down there...look up at the sky!' The visitors were gently gliding away behind the tall pines that line our street. Nevertheless, Mom saw enough to understand my excitement. [Ed note: All this was confirmed in my separate interview with the mother.]

"At this point, we were running into the street to get a better view. Every nerve in my entire body seemed to be wired in high gear, as my hair was raised and my skin

*Two nights later, the witness spotted the UFO through her living room window.*

prickled into huge goose bumps. Such an experience takes a little while to recover from. I found myself standing around in the street shaking my head in amazement. 'I just can't believe it happened to me!' I kept repeating."

Thus ended the first encounter. Two nights later, Nanette was on the phone with me for a full hour, as we went over the details of her sighting. The call concluded at 11 p.m. and she went to watch MASH on the local TV. One half hour later...

"I gathered myself up from the floor in front of the television; 11:30 p.m.... MASH was going off the air. On a whim I looked out the window to see if my friends would return. [Ed note: When I asked her why she referred to "them" as her friends, she replied that she did so because she wasn't afraid.]. Never in a million years could I effectively describe the jolt in my stomach and to my nervous system as my eyes focused on the bright, fluorescent light in the sky, hovering only a relatively short distance outside the window. The huge object was soundlessly suspended a few hundred feet above the tree-line horizon.

"I stared in complete wonder for several seconds before I recovered my voice. 'Mom, Mom, come here, look!' She was dialing a long distance call to her sister in West Virginia and the imperativeness of my shouts hadn't registered with her.

"Mom, come see this! They're back!" On this second effort I resorted to stomping my foot to punctuate my excitement.

"What's wrong? What're you looking at? She finally put the phone down and came to the rescue of her exasperated daughter. [In a separate interview Mrs. Morrison, the mother, explained that she had just succeeded in dialing the long distance call and was very reluctant to drop it merely to come to the window. But she did, and confirmed the sighting; a very important point, for otherwise one might be tempted to ascribe the daughter's sighting to wishful thinking!]

"Amazingly enough, throughout this exchange, the UFO remained stationary, but just as soon as my mother saw the object, it flared up suddenly, brighter than ever, as if in signal to me. It then zipped away at an incredible speed.

"My mother and I made a mad dash across the short distance to the front door (see diagram) and out to the porch. There was absolutely nothing to be seen, nor was there any sound. Had it been any type of our aircraft it would have had to be still visible and/or leaving some sound behind it. Stunned, we just stared at each other. I spoke first: 'Can you believe that? Two times in two days [actually, three]. Hard enough to believe the first sighting, but this second...it's really incredible!'

"Mom just shook her head in disbelief. 'I wouldn't believe it...but I saw it both times, too.' We both realized that this must be the same space craft that had followed me home only two nights previously [Ed note: This does not necessarily follow, but the witnesses feel strongly on this point]. We scanned the skies for several more minutes but to no avail. That was it, and we have had no sighting since then. We ventured back into the house and I rehashed my telephone conversation with you. Barely 30 minutes had elapsed since I had hung up the phone with you!"

(Continued on Page 15)

# Project Hessdalen: The Encounter

*This is the Hessdalen Valley in central Norway, site of numerous 'lights in the sky.'*

**A** major new mystery has been catapulted into ufology (not that all of ufology isn't a mystery!) It concerns NL's (Nocturnal Lights) or, if you wish, LITS (Lights in the Sky) which have captured the attention of Norwegian ufologists and their associates in neighboring countries. While such lights may be explainable as "earthlights" or lights generated by electromagnetic fields associated with geologic faults (an explanation that is growing in popularity) the question is left open as to why these lights have only recently appeared in these locations in relative profusion and why there appear to be associated with the sightings of lights, also sightings of "craft" with definitely outlined shapes.

These lights have been photographed and a few of these came to my attention over a year ago but, I must confess, that I set them aside, pending further information. After all, what can be done about lights in the sky? Although they are the most frequently reported class of UFOs, little can be done about them unless one has expensive spectrographic and other equipment and knows where to place it so as to be ready for the next nocturnal light that shows up.

Now we have more information, thanks to the work of a small but active group of Scandinavian ufologists who have organized "Project Hessdalen" with the purpose of deploying such equipment to an area where for months the lights have been localized: the Hessdalen Valley, some 80 miles from Trondheim, in central Norway. Earlier, virtually identical lights were

observed near the town of Arendal, in southern Norway, some 400 miles to the south of Hessdalen. As they were ceasing in the Arendal area they apparently transferred their attention to the northern theater of operations.

It was not until I met and conferred with members of Project Hessdalen, and accepted their kind invitation to become a member of their Advisory Committee, that I recognized the potential importance of "the colored lights of Norway" whose study (if they continue and if Project Hessdalen continues with the enthusiasm with which it has started) is almost certain to yield results of outstanding scientific value.

**A** bi-weekly newsletter has been initiated, funds are being collected, and a scientific program is taking form. It is of interest to quote from a recent Project Hessdalen Newsletter:

"Leif Havik will arrange a meeting at the University of Trondheim...and will resume his contact with the Seismological Observatory.

"Owe Lewitzki has made a short list of suitable cameras for movies and still shots. All cameras have to withstand rough winter climate. [See accompanying photos of the observing site and some photos of the lights obtained in the past, taken with the shutter open for 5-10 seconds]. Havik will

get detailed geologic maps of Hessdalen... for Paul Devereaux, asking him to propose proper geological instrumentation [Devereaux is the author of *Earthlights* and one of the chief proponents of the geological school of (UFO origin) for use at the site."

Now please note this ambitious plan! "We are going to send a letter to every household in Holtalen [of which Hessdalen is a part...but lest the reader becomes alarmed, there are but 1083 households in Holtalen and in Mitre Gauldal 2179 households]. These areas had the most UFO reports last year. We will describe the project and ask them to write down every UFO sighting they have had. We will enclose prepaid, self-addressed envelopes...a meeting with the people of Hessdalen will be arranged for November this year."

We salute their enthusiasm, and if it continues, I plan to visit Norway in 1984. In this I have been "scooped" by Hilary Evans in England, whose account of his summer 1983 visit can be found in the MUFON Journal, July 1983. His description of the Norwegian scenery may well move some readers to use Hessdalen as an excuse to visit Norway.

Lief Havik, a member of Project Hessdalen, has kindly sent us some material on the Hessdalen sightings of some time ago and on the history of these Norwegian Lights. His article, abbreviated in the interests of space, follows below.

## The Colored Lights of Norway

The Hessdalen Valley has been a well known name here in Norway, as well as in our neighboring countries [Ed note: although I couldn't find it on a large scale map]. Hessdalen is a valley 130 km. from Trondheim, in the middle part of Norway. Because sightings are still going on in this area, this article cannot be complete; later we can follow the cases step by step. We must ask you to compare these observations with those in Arendal, a small town in southern Norway. The Arendal sightings were very similar to these in Hessdalen, although about 700 km. separate the two locations. The sightings in Arendal started in early November, 1981 and ended at the end of December last year. But just when the sightings were tapering off in Arendal, they started in Hessdalen! In both places the UFOs preferred to appear about 7:30 to 8 p.m. and in both places the UFOs motion was similar: vertically above the mountains, and they could move horizontally with enormous speed, or slowly, or could hover for minutes above the mountains before they again moved.

Since the beginning of December 1981, many bright lights have been seen but often also egg-shaped and cigar-shaped objects. Very seldom have so many people seen so many flying objects, in such a short period. We now have several hundred witnesses. We have not interviewed many witnesses as yet [Ed note: this was written in 1982; since then we understand a fair amount of interviewing has gone on now that Project Hessdalen is under way], preferring to concentrate on making observations ourselves.

However, one witness, Lars Lillevold, told us: "I went out of my house in the evening of Jan. 18, 1982, and about 7:30 p.m. [by then in Norway in January it had already been dark for several hours] I saw an egg-shaped object above a telephone line about 30 meters [100 feet] from my house. It had a metallic center with a bright orange light surrounding it (energy field?). The latter was like a soft woolly covering which I felt would be soft to the touch. I am sure the object itself was made of metal. It stood still, silently, before it began to move slowly through the valley."

Some people have seen egg-shaped objects with windows from which streamed bright yellow-white light. But all agree that the light is shining through some sort of covering...a "dead" light.

Interest ran high in Hessdalen and some people gave up looking at the 7:30

## UFOs in Hessdalen, Norway

news on T.V. and went out to some high spot in hopes of spotting these remarkable UFOs. Often we can count about 100 cars with curious people.

We have used a magnetic field detector with a frequency range of 1-10 Hz but have not recorded anything yet, even though one of the objects passed less than 3 km. from us. On a map provided by the Norwegian Geological Institute, we have found a very strong earth magnetic field exactly where the UFOs are passing. Some UFOs seem to disappear just where the strongest fields are. This area is a rich mineral area and was an early mining area.

What is surprising to me is the way these objects move. They suddenly become visible and move to the north, and then suddenly disappear. They can move at enormous speeds or as slowly as a helicopter or even more slowly. They can hover over the mountains, move up and down, up and down, like a ball bouncing on a floor.

Since the publication of an article about these sightings we have received more reports from this area; they seem to get more and more remarkable. One report, from Jon Aspaas, follows:

"On the night of April 1, and about half-past midnight, I saw a big oblong object passing slowly in front of the mountain Rogne. The object was well lighted and came from the south in Hessdalen."

To illustrate the sightings in Hessdalen I will try to describe some of our sightings. One can understand that it is impossible to interview all of the witnesses; but that is not absolutely necessary when we already know so much about the sightings ourselves.

On the 17th of March we went on an expedition to Hessdalen. We stayed for four days and we were rewarded by six observations and four photos. On the first day we were just packing up our equipment on a snow sled (see photo of equipment) and the time was about 7:20 p.m. Somehow we didn't think we'd make any sightings that evening but at 7:32 Lars Lillevold shouted, "There it is!", and we ran to the road which was about 80 feet away. There we were standing, looking at an oblong object, slowly passing in front of Finnsaahoegda (a mountain). It was absolutely soundless, and disappeared to the north. We could see the mountain in the background, and I suppose the object was about 600 meters (1950 ft.) above the valley ground. Unfortunately our cameras were among our equipment on the sled.

We brought our equipment to the Chalet Vaarhusvolla but went back to Aspaas-hill and there we found the Norwegian Air Force and some pressmen. At 8:39 p.m. "something" came from the north, and crossed over Finnsaahoegda going west. At 9:45 we went back to the

*Project Hessdalen has been organized to systematically record the numerous sightings in the Hessdalen Valley since December, 1981. Objects have appeared in a variety of shapes including egg and cigar-shaped and oblong.*

# Hessdalen — continued

chalet and enjoyed 1½ hours of skiing [Ed: a proper way to enjoy UFO watching].

By the way, my camera is a Praktika LTL 3 with an Itores 135x2 (conv.), film, Kodak Ektachrome 400 ASA, exposure time 1/15, at f/5.6

Mr. Havik also included in his paper a detailed account of the various local theories being advanced for these many sightings. Because of their basically amusing nature, I have taken the liberty of summarizing them here. You will recognize the very familiar tendency of the expert in his own field attempting to find a solution in **terms of his own expertise**, blithely disregarding the solutions of others, and the facts as well.

Thus we have the expert in optics pontificating that sightings were due to reflections between cold and warm air, especially since these were observed in a valley where this is more apt to occur.

This disregards the facts that these sightings were made in all weather conditions, in temperatures ranging from 84F to well below freezing, and even in snowstorms, and for a definite period of time. Surely warm and cold layers of air existed in that region for many years in the past. Further, the motions suggest controlled actions, hardly to be expected from random reflections...and reflections of what?

Next we have the meteorologist speaking: Reflections from cars 50 miles away! Again, why reflections at this particular time and not in the past?

Let us pass on quickly to the university astronomer: The planet Mars! Now, just what is Mars doing in the valley, traveling from south to north, and with a mountain in the background? Many sightings were made from hill tops, looking down into the valley.

And then we have the arm-chair experts: All lies and hallucinations.

Perhaps only a psychologist can tell us why the human mind, especially one trained in a particular subject, so desperately resists something new that is not in his field? And, mind you, without bothering to look into the facts for himself. Why do they abandon scientific thinking when it comes to anything outside their field? I am reminded of the time that the director of the Jodrell Bank radio telescope in England dismissed the now famous New Zealand UFO movies as "a meteorite burning up in the atmosphere"! Yet that man calls himself a scientist but does not think like a scientist.

Mr. Havik points out that it is hard to photograph an hallucination and, as for lies, the sightings were confirmed by the Norwegian State Television and by the Norwegian Air Force. He puts it well when

he writes: "All these theories are put forth by so called 'experts' who want to understand and explain everything. I am ashamed for these people, who are well educated professors and so on; it looks like some of them want to 'explain' themselves to death. They are behaving like idiots. These phenomena may have a natural explanation, physical or psychological. It is a pity that people who understand physics and psychology don't want to come to Hessdalen, although they have been invited."

Now that "Project Hessdalen" is under way, and interest of scientists open minded enough to "be curious and anxious to find out," to use Schroedinger's description of the ideal scientist, has been aroused, we may get someplace.

Certainly these strange lights, although they seem to behave in a programmed manner and can hover, move slowly or very rapidly, vertically and horizontally, may have a "natural" explanation, as earthlights etc. But it is not enough merely to have a label for something, and have that label fool us into thinking that because we have labelled something, we understand it!

We wish Project Hessdalen success, and may the lights appear long enough and often enough for enough data to be gathered. □

The photos at left were taken at exposures of 5 to 10 seconds. A magnetic field detector has been used in the past, without recording any effect.

## 3d Bufora International UFO Congress

High Wycombe, a suburb of London, was the scene of the Third International UFO Conference, sponsored by the British UFO Research Organization (BUFORA), Aug. 27-29, 1983. This Congress might be characterized as having provided a broader than usual platform for expression of opinions and theories about the UFO phenomenon while at the same time fortunately avoiding the pseudo-religious, cultist and "doomsayer" papers portraying UFOs as messengers of dire events.

Topics ranged from the conventional "nuts and bolts" of extraterrestrial manufacture, coming here from some cosmic Cape Canaveral, to the highly unconventional concept of UFOs coming to us from within the sun. In between, discussions focused on ball lightning, radar returns, hypnotic regressions, psychic aspects of UFOs, earthlights and other lights, and commentaries on the "state of the art."

Of the 14 papers presented, only six dealt, all or in part, with UFO events. Five were UFO-related (research techniques, UFO theory, sociological aspects of UFOs) and three might be called "situation papers" (research attitudes and principles). The first are more easily described than the others. Dr. Harley Rutledge presented, in an informal manner, the story of the field work which became the basis of his book, "Project Identification"; Stanton Friedman expounded his favorite theme (Flying Saucers are Real) emphasizing more than in the past the spectre of government "cover-up," which made his talk even more vivid than usual; Peter Day showed and discussed his now famous movies of a truly unidentified ball of light traversing the daylight sky (which is being investigated with renewed interest); Paul Norman, from Australia, brought up to date the many circumstances surrounding the mysterious disappearance of the pilot, Frederick Valentich, over the Bass Strait off the south coast of Australia (the conclusion remains that both his disappearance and the sightings of UFOs at that time by others than Valentich remain a total mystery); and Jenny Randles, in her paper, "Opening Up the Windows," dealt with geographical areas which seem to be centers (windows) of UFO activity. Such windows may be real or artificial: a

given area may have one or more avid UFO investigators who attract UFO reports once their interests become known in the community, UFO events which would have otherwise gone unsung. Randles speculated on the possibility that some witnesses to UFO events may themselves act as a window, and on the "contagion" by which the flow of reports (not all genuine) are caused by media exposure of one or more spectacular cases in the area. Her paper, one of the more critical and thoughtful presented, also dealt with the "OZ Factor," or the paranormal or altered state of consciousness aspects of the UFO phenomenon.

Perhaps the most dramatic presentation, and the most impressive visually, was the description of "Project Hessdalen" (see article this issue) by Jan Fjellander of Sweden. Over a considerable span of time, utterly mysterious colored lights have appeared in the skies over Hessdalen in Norway, bright enough to be photographed and resulting in some truly spectacular color reproductions, which were shown as slides. A plea was made for assistance in further research on this phenomenon. Later, a Hessdalen Scientific Advisory Board was created to guide such investigation and some financial support was pledged.

The five UFO-related papers were extremely varied in content. Peter Warrington, as a non-professional analyst of radar techniques, was critical of many of the claims of radar detection of UFOs. This was met by criticism from the floor, in particular from a professional radar operator of many years experience.

No UFO conference these days is complete without some mention of abductions and hypnotic regression, and in view of the rising prominence of this aspect of the subject it is surprising that there was only one presentation. Harry Harris provided this, accompanied by a video presentation of a hypnotic regression.

Without doubt the most controversial paper was given by Ali AbuTaha who, with the aid of standard formulae of physics and chemistry, sought to establish that condi-

tions at a definite layer within the sun would be hospitable to physical life and that this, in turn, might be responsible for UFO sightings.

Another theory of UFO sightings, Earthlights, or lights purported to be associated with geologic fault lines and stress patterns, was presented by Paul Deveraux. Despite the authoritarian manner in which the paper was presented, the audience was not inclined to accept its conclusions without reservation.

Hilary Evans' paper, "The Liars and Lunatics, and What we can Learn from Them," was in a sense a comedy relief to the serious proceedings, but it was levity with a serious message; only by assessing the lunatic fringe and the "con" artists can we "calibrate the system" and establish the value of the content of ufology.

The three papers that were directed toward assessing the present status of ufology were those by Per Andersen, Bertil Kuhlemann, and Allen Hynek. Andersen presented the results of a survey of Danish scientists on their attitudes toward UFOs. The results were comparable to the survey of American Astronomers made several years ago by Professor Sturrock of Stanford University: the majority expressed scientific interest in the subject. When, however, they were asked about the nature of the UFO phenomenon, only 3% voted for the extraterrestrial solution while 32% held out for "natural phenomenon" and 30% for "man-made." (All of which, in the writer's opinion, shows how little scientists in general know about the complexity of the UFO phenomenon!)

Bertil Kuhlemann dealt at some length with what things could be measured and classified in UFO research and those things it would be difficult to quantify. He urged that standards and reference frameworks be set up. "Measure what is possible to measure, and make possible the measurement of that which has not been possible," he said, quoting a statement made by an 18th century scientist. This represents a fair summary of his thesis.

(Continued on Page 16)

# A Ring on a Panhandle Ranch...and others

Skip Ellzey examines physical traces surrounding the ring at the Texas Panhandle ranch.

by W. Clark Ellzey

At the time of discovery on May 20, 1983, the ring appeared to be a 4-inch wide band of green grass, surrounded by yellow-green Buffalo grass. Diameter of the ring was 29 feet. Outside the circle, were three smaller circles.

*Ed note: Clark Ellzey is the owner of the LZ Ranch near Perryton, Tex., a long-time Associate of the Center, and an experienced investigator. Although no UFO was seen at the site, we present this case here because of the peculiar circumstances surrounding it and because of the remarkable resemblance of this ring to those found where a UFO has been seen at the site.*

On May 20, Sam Meadows, a cowboy who had worked for the Teas Ranch for 35 years, had been riding with a Mexican boy across a section of pasture which he had covered hundreds of times before, when he came across something he had never seen before — a circular region where the grass had obviously been disturbed.

**TYPE:** CE-II (?)  
**DATE:** May 10-20, 1983 (Ring was discovered May 20)  
**TIME:** Irrelevant  
**WITNESSES:** Two as discoverers; four additional at time of investigation.  
**PLACE:** Teas Ranch, Hemphill County, Texas Panhandle.

The two carefully examined the site but agreed not to talk about it, fearing

being kidded about its being a UFO landing site. Several weeks later, however, they decided to tell the son-in-law of the ranch owner, Mr. Bourassa, who then accompanied them to the pasture. Meadows estimated that whatever had removed the grass in the ring had done so about May 10, as estimated from the rate of growth of new grass that was beginning to grow in the ring. (In this country, after a grass fire, the new grass comes up much greener than the burned grass was originally.)

Now Bourassa pondered several weeks about the strange ring and finally decided to report it to somebody. Thus, on June 29, I received a call from Mr. Bourassa who, after being assured that I had no connection with the government (!) reported the circumstances. He had located me through Ben Ezell, Editor of the CANADIAN RECORD, (Canadian, Tex.), a good friend of mine, and asked me to come to see for myself, adding that Mr. Ezell wanted to come along if I did.

We did so on July 1, 1983. We approached the site across the pasture through weeds and high grass, since there were no cattle in the section at the time. Bourassa drove directly to it. I asked that everybody stay in the car until I could make a quick survey. There were horse tracks, a couple of tire tracks, but nothing to mar the circle.

Then we made measurements, took soil and grass samples, and checked and double checked Bourassa's story. Inquiry resulted in the strong feeling that both

Bourassa and Meadows were mature, honest, dependable men, not given to exaggeration, were shy of notoriety, and sincerely interested in finding out what had happened.

The dimensions of the ring are shown in the diagram. The grass inside and outside the ring was exactly the same: yellow-green pasture Buffalo grass, but in the ring itself the grass was a very dark green and only about 1/4 inch long. Since this is characteristic of new grass that comes up after the old grass has been burned, this led to speculation that the ring had been caused by a possible burn or blast. No natural fire would have confined itself to a precise four inch wide circle, 29 feet in diameter.

Of particular interest in connection with the burn or blast theory was the discovery of a prickly-pear cactus "leaf" at the very edge of the ring. Its flat side toward the ring had all its spines missing while all the spines on the side away from the ring were undamaged.

Also of interest were two spots, one on one side of the circle and the second on the other (see drawing), but there was no third one, discouraging the speculation that these were tripod "landing" marks. Nearby was found a hole, four inches wide and ten inches deep (not shown) which showed no connection with an underground rodent tunnel. Speculation: core sample?

*Ed note: This ends Mr. Ellzey's account. On Sept. 1, 1983, I visited Wiltshire, England, to see what remained of mysterious circles that had had much*

*media publicity earlier. Photo No. 1 shows a panoramic view of the entire set of circles, while Photo No. 2 is my photograph of the central part of one of the smaller circles, showing that weeks after the circles first appeared, and after the farmer had harvested the field of grain, the grain stalks in the circle were still very well matted down, lying well below the closely cropped grain stalks in the rest of the field.*

As the panoramic photo shows, these were two very large circles, about 30 to 40 feet across, and several smaller ones; they looked as though some giant cookie cutter had come down hard on the grain field. One notes that the smaller circles are at right angles to each other. Local explanations that these circles were formed by "whirlwinds" is untenable. Whirlwinds could never exhibit such precision! Since Wiltshire is just a stone's throw away from the notorious Warminster, scene of many reported but unverified UFO sightings over the past years, others chose the UFO hypothesis to explain the circles. □

The photo above is a panoramic view of a set of circles at Wiltshire, England. The smaller picture above shows the central part of one of the smaller circles. Weeks after the circles first appeared, and after the grain had been harvested, the stalks were still well matted down.

# The UFO Movement in Poland

by Zbigniew Bolnar

*Ed note: Sometime ago we asked Zbigniew Bolnar, our correspondent in Poland, to tell us about the attitudes in Poland toward the UFO phenomenon. Here is his reply.*

Public interest in Flying Saucers arose in Poland in 1958 when two series of articles appeared, written by a young journalist, A. Trepka, and based on American sources. "Attention! Flying Saucers" appeared in the Polish magazine, Skrzydlata Polska, and the other, "On Flying Saucers" appeared in a local newspaper.

A year later, the same author had another series in this newspaper, Wieczor Wybrzeża, called "Flying Saucers Over Poland" in which he answered, among other things, charges from readers that Flying Saucers, by some strange decree of fate, appeared exclusively over Western countries. (The term UFO, incidentally, was not known to Poland at that time.) Occasional references to Flying Saucers had been made in the press before 1958 but were always treated in the context of "capitalist propaganda." Trepka pointed out in those articles that the lack of reports in Poland arose not from a lack of sightings but from lack of communication.

The first Polish book on the subject, "Flying Saucers," almost amounted to a plagiarized version of Menzel's book of that same title. It was written by J. Thor in response to the newly aroused public interest in UFO problems; the author has radically changed his opinions about UFOs since.

During the next few years, silence reigned in Poland about UFOs and was broken only in the second half of the seventies, partly because of the interest in paleo-astronautics (ancient astronauts). The real upswing of public interest in UFOs came in 1977 and 1978 when the writer published three series of comprehensive articles in the Polish weekly magazines: "The Air Full of UFOs" in Przegląd Techniczny (Technical Review), "UFO" in the student's weekly ITD (And So On), and "The Landscape of Ufolandia" in Nowa Wies (New Village).

*These two drawings are from a Polish comic book showing the CE-III experience of Polish farmer, Jan Wolski.*

These publications apparently spawned a whole chain of articles, and polemics were carried on not only in the press but also on the radio and TV. Interest was at its highest peak in the early summer of 1978 and was due largely to the highly publicized abduction of a farmer, Jan Wolski, by four small beings (see article) who gave him a thorough examination.

At this time, the UFO topic became highly fashionable. People talked about flying saucers in the streets, in coffee-bars, and in busses. Lectures and meetings were arranged and many clubs and UFO associ-

ations were set up as a result of this outburst of interest. Even children went about writing "UFO" on walls and cars!

## UFO Organizations

There exist now in Poland several organizations, with legal status, dealing with the UFO topic. They are associations of UFO enthusiasts, but containing many people from different professions. Their activities can hardly be called scientific but their main value lies in gathering information about UFO encounters in Poland.

## Polish UFO Data

To the best of this writer's knowledge, the most voluminous collection of Polish UFO reports is in his possession, the result of data collection over many years. Making my address and phone number freely available has led to the receipt of hundreds of such reports. In addition, the writer has a private network of associates, people of good will who search out reports in their neighborhoods.

There seems to be no question that Polish UFO reports fit the general world-wide pattern. They comprise not only NL

and DD cases, but also CE cases, including those of the Third Kind.

## UFOs and the Scientific Circles

The situation in Poland regarding UFOs and science reflects the world-wide situation. Most Polish scientists do not have access to UFO data and do not seek it out. Their knowledge about UFOs is what they gather from the popular press, which they hold suspect. Access to foreign UFO publications is sparse. Most Polish scientists do not publicly express an opinion about UFOs and they take no action, but they certainly do have their private opinions.

Those few scientist who have expressed an active attitude fall into two distinct groups (Ed note: as just about anywhere in the world). The first is skeptical; they hold that the subject is not worthy of investigation that would promise any new discoveries. They have themselves carried out no investigations and their information is based on second- and third-hand sources.

The second group expresses an interest in the scientific investigation of UFOs and sets its hopes on cognitive discoveries; they appear to all intents and purposes to be ready to accept a challenge. They are not, however, formally linked, but just know about each other. They do some personal investigations and are ready to discuss such matters privately with sympathetic colleagues.

## Story of a Polish CE-III

Ed note: This is the Close Encounter of the Third Kind (or Fourth Kind, if you prefer since it involves an abduction) mentioned in Mr. Bolnar's article. It apparently caused quite a wave of excitement and even became the subject of a Polish Comics book (the illustrations here are taken from that book...we do not vouch for their accuracy.) We present the case here with the usual (and strong) disclaimer that it is impossible for us to research foreign UFO cases; it is of value, at least sociologically, because here we have reported an abduction case, complete with the traditional personal and intimate medical examination. It appears most unlikely for this simple farmer, who never traveled far from his small village of Emilcin, in eastern Poland, to have known about UFO abductions, at least in any detail. Yet he describes the "abduction pattern" well known to all ufologists.

TYPE: CE-III  
DATE: May 19, 1978  
TIME: Early Morning  
DURATION: 15-20 Minutes  
WITNESSES: 1 +  
PLACE: Emilcin (Poland)

Here is the story, in Jan Wolski's own words, as reported by Bolnar, who stated that Wolski was a 71-year old farmer, who had never ventured far from home, a village in the vicinity of Lublin:

# A Polish CE-III — continued

"That morning I was driving back home, sitting on my cart. My mare was going slowly so I thought of taking a short cut through a birch wood close to my field. The mare was going along a road leading through trees and bushes when I suddenly spotted two men walking in front of us in the same direction. I thought they must be hunters or scouts from some camp. When they spotted us they seemed to go slower, as if they wanted me to catch up with them. When my cart was close to them one walked to the right, the other to the left, they jumped on my cart, which is quite natural in the country.

"Then I turned my head slowly and I saw them. They were quite small, maybe 150 cm. (5 feet) tall. I noticed only their faces and hands. They were green. I remember quite well that they had sort of "membranes" between their fingers. Their eyes were sort of dark and slanting, and their cheek bones stuck out more than ours. Their teeth were very white. Their necks were quite different. They had something like a hump. They wore dark gray overalls that went from head to toe.

"A few minutes later I heard them talking, but I did not know this kind of voice. They said something like: ta-ta-ta-ta. I did not have enough courage to look at them but I knew they were looking at me.

"I was driving as if nothing had happened. Trees, bushes, thicket all around us. Then we approached a clearing and I was deeply surprised because a "bus" was hanging in the air over that clearing. It was making slow moves but without any noise. The mare did not even get scared.

"When we were about 20 meters (65 feet) from the place where the bus was hanging, they gave me a sign with a hand to stop, and then motioned me to get off and follow them. I fastened the reins as I always do when I leave my horse. We walked, one on each side of me, up to the bus, and there was something like a small elevator hanging down from the bus. It came almost to the ground. One of them jumped into the elevator and gave me a

sign to do the same. Soon we were going upward quickly and smoothly. When we stopped in front of the door he made me enter and pointed to the left. I just got inside when I noticed two other people like them. One of them held two small 'saucers.'

"The room was dark, no bulbs, no engines. There was nothing. The walls were as if plastic, molded from one piece. There were all around the room small pews fastened to the walls with the same "strings" [cords, wires?] as in the elevator. The light from the outside poured in. The door was also strange. It had no hinges. It "scrolled" like a carpet.

"The one that entered with me pointed to my clothes, wanting me to undress. So four of them were standing around me when I started undressing. I took off my overcoat and jacket and shirt. I thought this would do, but they pointed to me to take off everything.

"The one who held the saucers came to me. They were half open and making a sound. One of the men took one of my hands and raised it, and then pulled it backwards. I forgot to say that while I was standing there undressed they started to eat something that looked like an icicle, but it crumbled like a cake. They are small pieces. One of them showed me what they were eating and asked me with a sign if I wanted to try it [this reminds one of the Joe Simonton "pancake" Blue Book case #7372, Eagle River, Wl., Apr. 18, 1961]. I gave them a sign that I did not want to.

"Next they took an interest in my belt. I think they were interested mostly in how the belt buckle worked. They looked surprised [With all this technology and they wonder how a belt buckle works???]

"I noticed birds at that moment. They were ravens or crows. They were alive and moving, but they couldn't fly.

"Then I got to put my clothes back on and they signed to me that I could go. I got into the elevator and bowed to them. They bowed to me, too.

"When I came back to my mare I knew I had been up there about 10 minutes. I estimated this from the amount of grass the mare had eaten.

"At home I told my wife and sons everything that I had seen. My sons ran to see the bus, but it had already gone."

Mr. Bolnar now continues the story.

People from the village went to the scene and discovered trodden grass and peculiar footprints and other traces indicating that somebody must have been there a short time earlier. All the village people stated that Jan Wolski was a very quiet man who never lied. He apparently did not dream this because his horse was new and did not yet know the way home.

Wolski signed a statement in which he swears to God that everything he said was true. Nonetheless, the story was so extraordinary that a shrug of the shoulders and a pitiful smile seemed the only possible reaction. However, many tests were carried out by scientists, a sociologist and a psychologist from the University of Lodz, and these indicated that the story was not a product of his imagination.

There was corroborative evidence: a small boy of six in the village, Adam, playing in a yard some 700 meters (almost a half mile) away saw, as he called it, a strange plane flying slowly, low above the ground, with a green-faced pilot inside.

Everything that could be learned from listening to the witnesses' accounts, and from the psychological tests, clinical experiments and forensic-like examinations seemed to confirm the truth of the farmer's and the boy's words. The tests revealed that it was completely groundless to suspect the farmer, who is a very simple man, of concocting a story like that.

*Ed note: Thus we add another weird story to the annals of ufology. We shall attempt to learn more of the tests that were given to the man and boy. Did all this really happen or is it another chapter in what Aime Michel has called "a festival of absurdity"? The fact remains that it is the experience of every serious UFO investigator that there seems to be no question that to the witnesses, the experience has been very, very real. We thus ask, on what level of reality?* □

# A Remarkable Double Encounter — continued

## ANALYSIS:

We are confronted once again with the essence of the UFO phenomenon: intelligent and responsible people who perceive a light or a craft, often near the ground, for which no ordinary viable explanation is at hand. In this case, on two separate nights. Though utterly strange, the phenomenon has been so repetitive over the past decades as to be boring. It's like having no new TV programs, only constant reruns.

The primary article of faith in science, and it comes down to faith, is that we live in a rational world and that there are rational explanations for all phenomena; this includes UFOs. The scientist clings to this faith for otherwise he is adrift in a chaotic universe. He becomes very uncomfortable in the face of something like the UFO phenomenon which continues to defy rational explanation; he would dearly love to say it just doesn't exist, that all these witnesses over the past decades have been

deluded. We may ask, is he sure who is being deluded?

As ufologists we must work toward a theory of the UFO phenomenon no matter how "far out" it may seem to conventional science at the moment. Several things stand out in the present case and are found in common with many other Close Encounter cases. The evidence for intelligent action of the UFO is obvious. The witness was openly followed, as though the UFO was intent on calling attention to itself; the brilliance of the light obscuring the shape of its source; the deliberate tracking of the car which in this case involved making the same turns as the car did; the "isolation effect"...its appearance during the absence of other traffic as though it had "chosen" its time for appearance; the non-banking glide in changing direction of motion and, the second instance, its totally unaccountable disappearance in an instant; and its soundlessness.

Also in common with many other Close Encounter cases, but this time from the standpoint of the witnesses: intelligence and responsibility as indicated both by the nature of their daily occupation and by the coherent and articulate presentation of their testimony; familiarity with the territory of occurrence; in this case 23 years residence in the area; and finally, the common denominator in virtually all UFO cases, the total bewilderment on realizing that they have in some way made contact with something outside their common everyday world.

These commonalities in both the UFO behavior and the witness' capabilities and reactions make it tough for the skeptic who demands in all these cases an acceptable commonplace explanation. In this case in particular, the fact that during the 23 year residence of the witnesses in that area nothing similar was reported argues strongly against a natural event which might be expected to happen more than once in 23 years. □

## SEASONS GREETINGS TO ALL OUR FRIENDS AND ASSOCIATES

### SCHEDULE OF ASSOCIATES--Application Form

| Associates  | Annual Contribution<br>(in US funds or equal) |                 |                 | Associate Benefits  |
|-------------|-----------------------------------------------|-----------------|-----------------|---------------------|

# International UFO Congress — continued

Hynek attempted an overview of the status of ufology, stressing the strong move away from the simplistic hypothesis of visitors from outer space coming here over vast astronomical distances and the growing prominence of the more "esoteric" theories. Tracing the changing attitudes of the public and of ufologists over the years, largely in terms of his own involvement in the subject, he pointed out that the main stumbling block to obtaining serious attention from the scientific community and from policy making and funding groups in society was indeed the extraterrestrial hypothesis which, for reasons considered entirely valid, it rejected out of hand, having confused the UFO phenomenon with that particular interpretation of the phenomenon. Hynek feels, with Vallee, that the solution to the UFO problem will prove to be far more exciting than merely space travel!

## PICUR Becomes ICUR

The day before the formal opening of the Third International UFO Congress (see above), an event of great potential significance for ufology occurred: the International Committee for UFO Research was born, its formal constitution was adopted, officers were elected and aims and objectives were set forth. In actuality, however, this Committee had been conceived some four years earlier and was known as PICUR, or the Provisional International Committee for UFO Research.

During those four years of gestation, the concept of international cooperation took form and member organizations from more than a dozen countries were re-

cruited. Now, after these four years, it was felt that the Committee was sufficiently well established to be able to dispense with the "P" for "Provisional" and to get down to the real business of the Committee. In an all-day meeting, and running well into the night, the Constitution of ICUR was hammered out and officers were elected. Bertil Kuhlemann from Sweden was named Chairman and Hynek, President (honorary). Robert Digby, of BUFORA, was elected Treasurer and Bjorne Haakensson, Secretary.

Kuhlemann, a business computer executive, is well known in ufological circles as forthright and energetic, and fully-dedicated to the serious study of the UFO phenomenon. In his address to the Committee he reviewed the recommendations of several working groups which earlier in the day had met to select, from a great many suggestions, those three or four they felt had the greatest immediate relevance. Those finally chosen were: the initiation of translation services, the adoption of classification and investigative procedural standards, and the establishment of communication links between UFO organizations in member countries.

Representatives of several member organizations from various countries pointed out that their organizations received publications in many languages which they were hard pressed to translate. [Here at the Center the problem is acute; we simply do not have the means to have the many magazines, books, letters we receive, written in at least a dozen different

languages, properly translated.] Clearly much valuable information is lost when we can't read what our colleagues are saying. One immediate step was taken to help this situation. The Committee voted to ask member organizations to provide a brief abstract in English to head each article published under their auspices. This, of course, is a well-recognized procedure in many scientific publications.

PICUR had already begun the publication of UFO INTERNATIONAL, a modest quarterly off-set magazine primarily for circulation to member organizations. This, plus a suggested frequent short newsletter, represents a step toward establishing viable communication links between ufologists in various countries.

The organization of ICUR is this: Membership is by countries, but each country can be represented by more than one qualified UFO organization in that country. Kuhlemann also pointed out that ICUR, being composed of countries and organizations rather than individuals, could work very well with the newly formed World Ufological Association (WUA) which is composed solely of individuals, as individuals, quite apart from their organizational affiliation, if any. The same would apply to the recently formed North American UFO Federation (NAUFOF) which is likewise composed of organizations, and thus there should be no obstacle in the way of cooperation between ICUR and NAUFOF, and WUA. □

### STOP!!! CHECK YOUR MAILING LABEL DATE

If the date shown on your label is 11/83, this is the anniversary of your last contribution to CUFOS and this is the last issue of IUR you will receive until your next contribution is received by CUFOS. Thank you very much for your continued support. Action now will continue your mailings uninterrupted.
